Built to connect.
Designed to last.

A distinctly developer-first identity for the full-stack NestJS ecosystem. Restrained. Confident. Recognizable.

BRAND GUIDELINES 1.0

One mark. Two connected parts.

A simple symbol that represents frontend and backend operating as one.

nestvexa

PRIMARY HORIZONTAL LOCKUP

Use on documentation headers, GitHub banners and product pages.

Color is a signature.

Use Jade as a precise accent, not as a full-page decoration.

JADE / BRAND
#0E9F79

GRAPHITE / INK
#111C25

WARM CANVAS
#F8FAF8

SOFT JADE
#DFF5EC

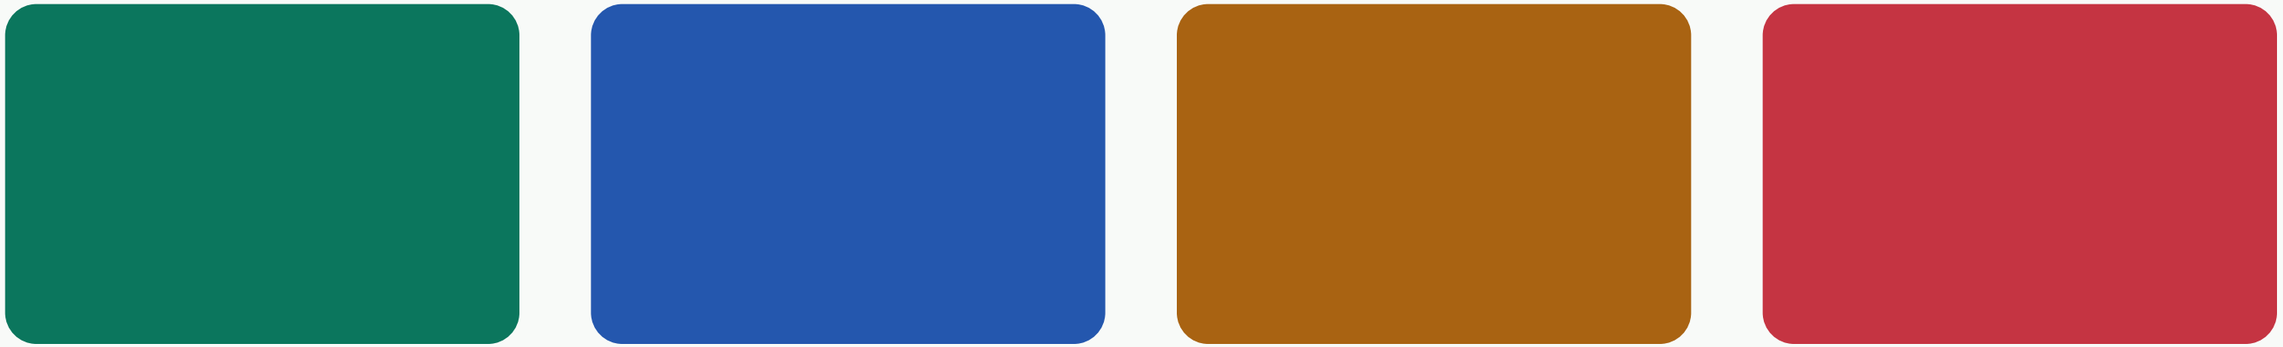

ACTION / CONTRAST

Jade Deep #0B765D

Primary button

Functional, not decorative.

Choose semantic colors based on meaning. Preserve 4.5:1 text contrast.

SUCCESS

#0B765D

INFORMATION

#2457AE

WARNING

#A96312

ERROR

#C53442

LIGHT MODE

Warm backgrounds / Graphite text

DARK MODE

Ink backgrounds / Jade accents

Quiet type. Strong hierarchy.

Use Inter for interface and editorial copy, JetBrains Mono for code.

Aa

Inter / Inter Display

Product UI, navigation, docs, titles, labels and metadata.

const build = createNestvexaApp();

JetBrains Mono / code, terminal and developer examples

H1	H2	H3	Body	Small
48 / 56 Semibold	32 / 40 Semibold	24 / 32 Semibold	16 / 26 Regular	14 / 20 Regular

Space gives the mark power.

Do not add glow, gradient, outlines, shadows or decorative elements.

Full color on light

Single color on dark

Monochrome on soft jade

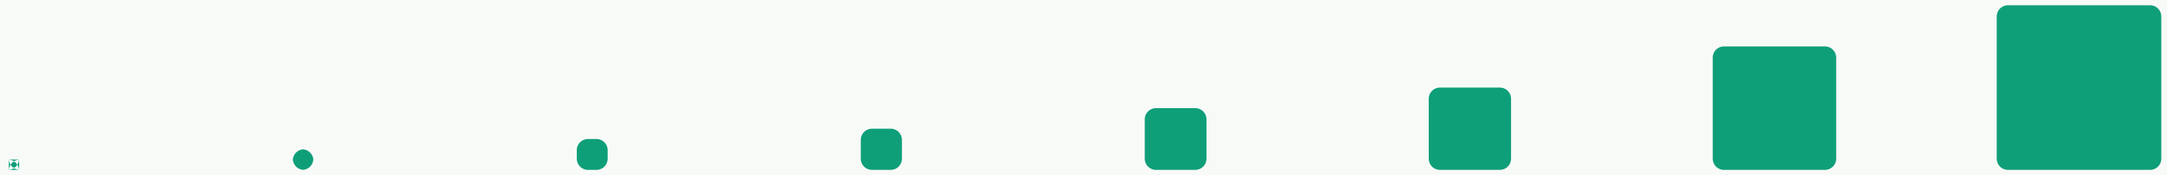

Minimum digital symbol: 24 px. Preferred favicon: 32 px or larger.

Clear space: at least 20% of the symbol height on every side.

Never stretch, tilt, recolor with multiple bright tones or use low contrast.

Calm, systematic spacing.

A 4 px spacing base keeps web applications and documentation predictable.

1	2	3	4	6	8	12	16
4 px	8 px	12 px	16 px	24 px	32 px	48 px	64 px

SMALL / 6px

MEDIUM / 10px

LARGE / 14px

EXTRA / 18px

Helpful, restrained UI.

Default components favor legibility, discoverability and predictable states.

Get started

Read docs

Open source

BUTTONS / clear purpose & states

Search documentation...

Choose a framework

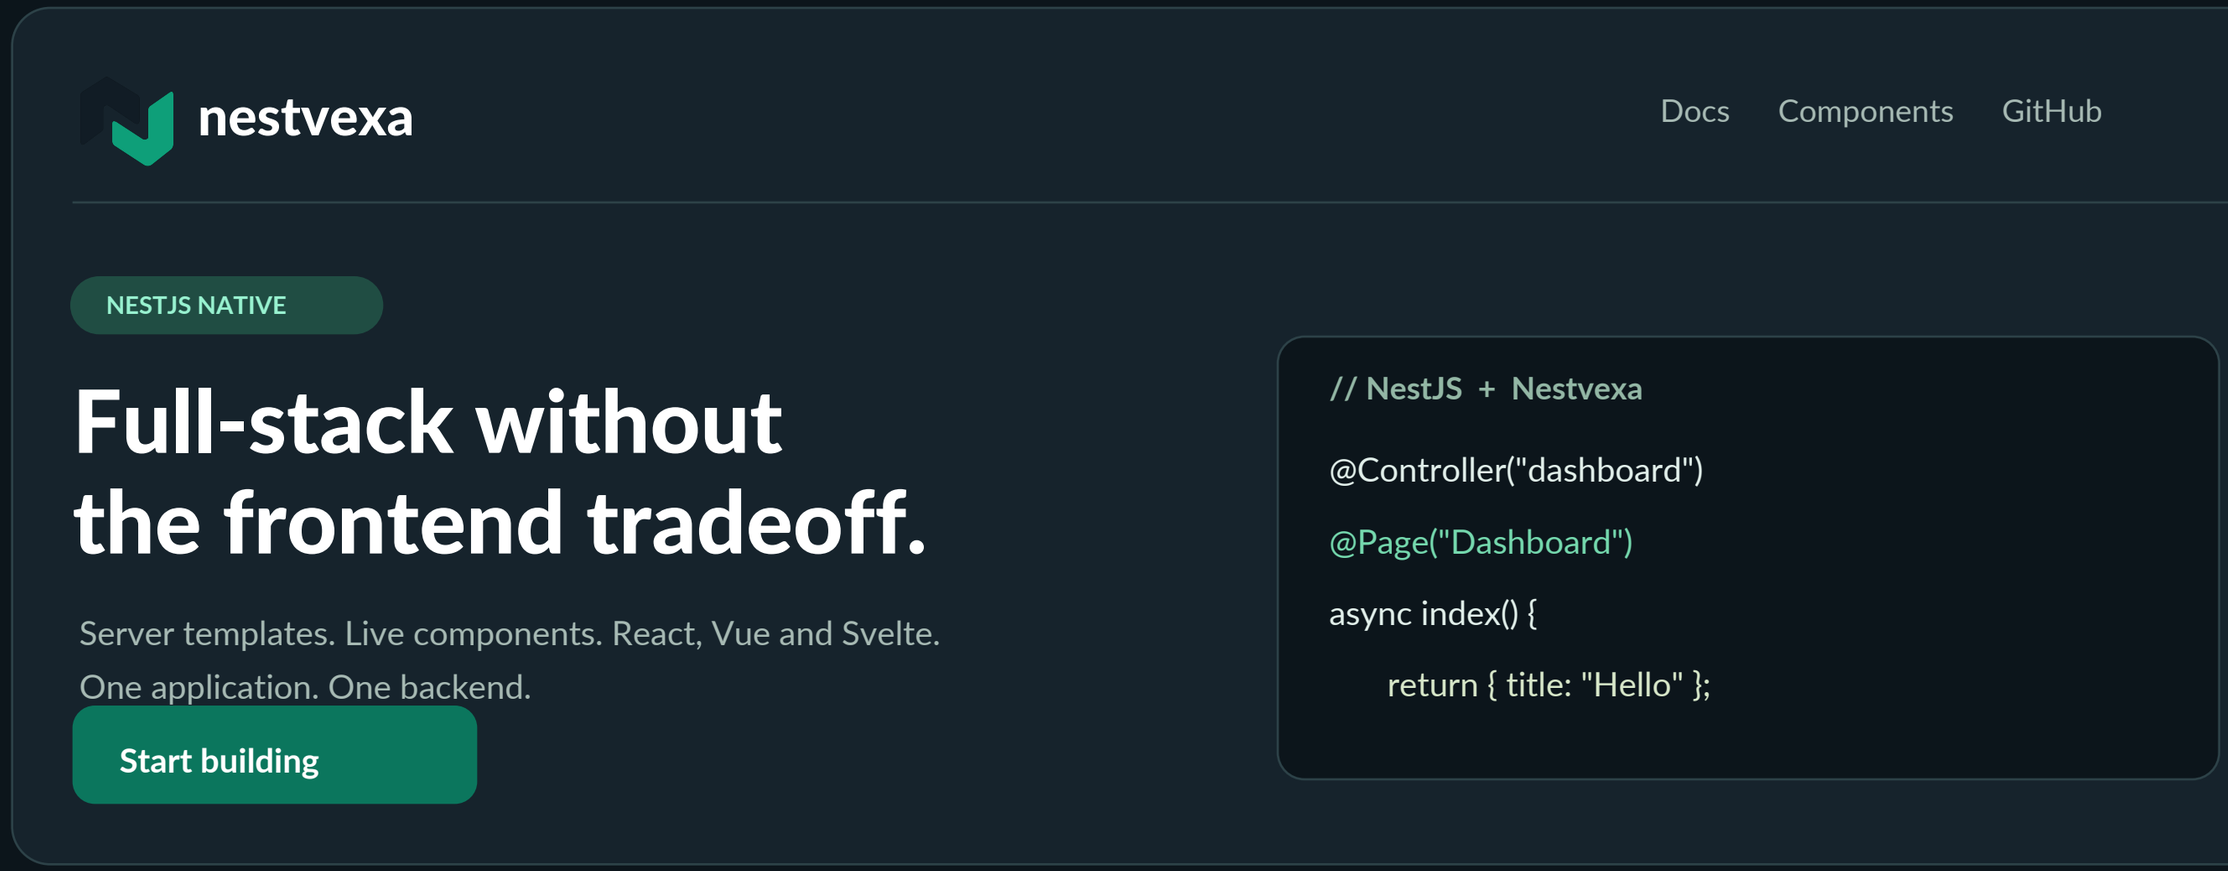

INPUTS / visible labels, helper text, errors & focus rings

Stable release

Framework adapter

Documentation is the flagship.

Build one visually consistent home for guides, API references and examples.

Brand integrity is a quality bar.

Stable tokens, accessible contrast and reusable source files belong in version control.

CONTRAST

Text on Jade must use dark ink; white CTA text uses deep Jade (#0B765D).

FOCUS

Use visible 3px focus rings; never rely on color alone for status.

MOTION

Default 120-280 ms. Respect prefers-reduced-motion.

MAINTENANCE

Single token source, versioned releases, visual regression checks.

SCALABILITY

Use semantic CSS tokens. Themes should not hard-code hex values.

COMMUNITY

Document naming and colors; require review for logo changes.

Ready for implementation.

Use the vector originals; treat this as a brand proposal pending final approval.

/logos/	Color / white / ink / jade SVG symbols; horizontal and stacked lockups
/png/	Raster exports, favicons, high-resolution application icons
/tokens/	JSON and CSS tokens for light and dark modes
